JQuery

1) What is jQuery?
   - jQuery is a fast, small, and feature-rich JavaScript library. It makes things like HTML document traversal and manipulation, event handling, animation, and Ajax much simpler with an easy-to-use API that works across a multitude of browsers. With a combination of versatility and extensibility.

2) How to Apply CSS Using JQuery, How to Add Class and Remove Class in Jquery, JQuery Animation?
   - Apply css using css() function.
   - Add class using addClass() function
   - Remove class using removeClass() function
   - Set animation using animation() function

3) How to create slider with animation?
   - It is GUI widgets, visual eggects and themes implemented using jQuery, CSS and HTML.
   - jQueryUI provides us a slider control through the slider widget, slider help us to get a certain value using a given range.
   - The animate option when set to true will create an animation effect when you directly click at ant point on the slider's axis.
   - Syntax :
     ```
     $("selector").slider({
         animate:value
     });
     ```

4) Event bubbling tickling example
